3.2 AUDIENCE

This document is intended for hospital staff, health system integrators, software designers or implementers. It is assumed that the reader has a working understanding of DICOM.

3.3 REMARKS

DICOM, by itself, does not guarantee interoperability. However, the Conformance Statement facilitates a first-level validation for interoperability between different applications supporting the same DICOM functionality.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication with FUJIFILM and other vendors' Medical equipment. The Conformance Statement should be read and understood in conjunction with the DICOM Standard [DICOM]. However, by itself it is not guaranteed to ensure the desired interoperability and a successful interconnectivity.

The user should be aware of the following important issues:

— The comparison of different conformance statements is the first step towards assessing interconnectivity between FUJIFILM and non- FUJIFILM equipment.

— Test procedures should be defined to validate the desired level of connectivity.

— The DICOM standard will evolve to meet the users' future requirements. FUJIFILM is actively involved in developing the standard further and therefore reserves the right to make changes to its products or to discontinue its delivery.

4.1 IMPLEMENTATION MODEL

4.1.1 Application Data Flow

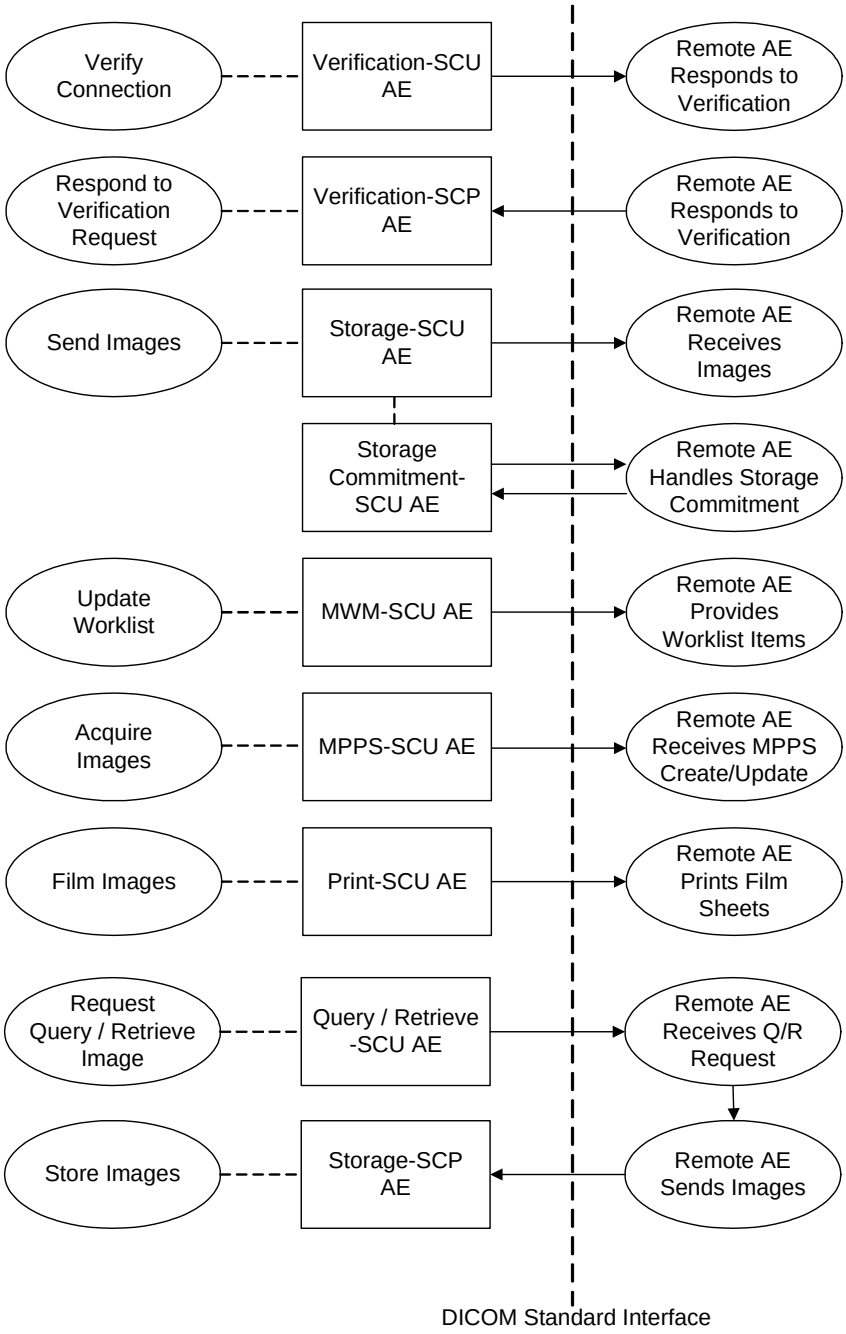

FIGURE 4.1-1 APPLICATION DATA FLOW DIAGRAM

— The Verification-SCU AE issues a C-ECHO to verify a DICOM connection to a remote AE. It is associated with the local real-world activity “Verify Connectivity”. “Verify Connectivity” is performed via the Service Tool.

— The Verification SCP AE responds successfully to C-ECHO requests from known AE Titles. It is associated with the local real-world activity “Respond to Verification Request”.

— The Storage-SCU Application Entity sends images to a remote AE. It is associated with the local real-world activity “Send Images”. “Send Images” is performed upon user request for each study completed or for specific images selected. When activated by user’s settings (auto-send), each marked set of images can be immediately stored to a preferred destination whenever a Patient/Study is closed by the user.

— Receiving the storage commitment request from the Storage-SCU AE, the Storage Commitment-SCU AE will request Storage Commitment and record commitment information in the local database if a commitment is successfully obtained.

— The MWM-SCU Application Entity receives Worklist information from a remote AE. It is associated with the local real-world activities “Update Worklist”. When the “Update Worklist” local real-world activity is performed the MWM-SCU Application Entity queries a remote AE for worklist items and provides the set of worklist items matching the query request. ”Update Worklist” is performed as a result of an operator request or can be performed automatically at specific time intervals.

— The MPPS-SCU Application Entity sends MPPS information to a remote AE. When the “Acquire Images” local real-world activity is performed the MPPS-SCU Application Entity creates and updates Modality Performed Procedure Step instances managed by a remote AE. Acquisition of images will result in automated creation of an MPPS Instance. Completion of the MPPS is performed as the result of an operator action.

— The Print-SCU Application Entity prints images on a remote AE (Printer). It is associated with the local real-world activity “Film Images”. “Film Images” creates a print-job within the print queue containing one or more virtual film sheets composed from images selected by the user.

— The Query/Retrieve-SCU Application Entity queries remote AEs for lists of studies, series and instances and retrieves selected studies, series or instances from lists. It is associated with the local real-world activity “Requests Query/Retrieve”

— The Storage-SCP Application Entity receives incoming images. It is associated with the local real-world activity “Store Images”.

4.1.2 Functional Definition of AEs

4.1.2.1 Functional Definition of Verification-SCU Application Entity

The Verification-SCU AE issues a C-ECHO to verify a DICOM connection to a remote AE. It is performed via the Service Tool.

4.1.2.2 Functional Definition of Verification-SCP Application Entity

The Verification-SCP AE responds successfully to C-ECHO requests from known AE Titles.

4.1.2.3 Functional Definition of Storage-SCU Application Entity

The existence of a send-job queue entry with associated network destination will activate the Storage-SCU AE. An association request is sent to the destination AE and upon successful negotiation of a Presentation Context the image transfer is started. If the association cannot be opened, the related send-job is set to an error state. By default, the Storage AE will retry to initiate another association for this send-job automatically.

4.1.2.4 Functional Definition of Storage Commitment-SCU Application Entity

The Storage Commitment-SCU AE receiving the storage commitment request from the Storage-SCU AE, the Storage Commitment-SCU AE will request Storage Commitment and record commitment information in the local database if a commitment is successfully obtained.

4.1.2.5 Functional Definition of MWM-SCU Application Entity

Worklist Update attempts to download a Worklist from a remote node. If the MWM-SCU AE establishes an Association to a remote AE, it will transfer all worklist items via the open Association. During receiving the worklist response items are counted and the query processing is canceled if the configurable limit of items is reached. The results will be displayed in a separate list, which will be cleared with the next Worklist Update.

4.1.2.6 Functional Definition of MPPS-SCU Application Entity

The MPPS-SCU AE creates an MPPS Instance automatically when the user selects and starts a worklist item. And the MPPS data is updated when the user completes the acquisition.

4.1.2.7 Functional Definition of Print-SCU Application Entity

The existence of a print-job in the print queue will activate the Print-SCU AE. An association is established with the printer and the printer’s status determined. If the printer is operating normally, the film sheets described within the print-job will be printed. Changes in printer status will be detected (e.g. out of film) and reported to the user. If the printer is not operating normally, the print-job will set to an error state and can be restarted by the user via the job control interface.

4.1.2.8 Functional Definition of Query/Retrieve-SCU Application Entity

The Query/Retrieve-SCU Application Entity is activated through the user interface when a user selects a remote AE to query (from a pre-configured list), then initiates a query. Queries are performed recursively from the study through the series and instance levels until all matching instances have been listed. And the Query/Retrieve AE is activated through the user interface when a user selects a study, series or instance for retrieval. A connection to the remote AE is established to initiate and monitor the retrieval and the Storage-SCP AE receives the retrieved instances.

4.1.2.9 Functional Definition of Storage-SCP Application Entity

Storage-SCP waits in the background for connections, will accept associations with Presentation Contexts for SOP Classes of the Storage Service Class, and will store the received instances to the local database where they may subsequently be listed and viewed through the user interface.

4.1.3 Sequencing of Real-World Activities

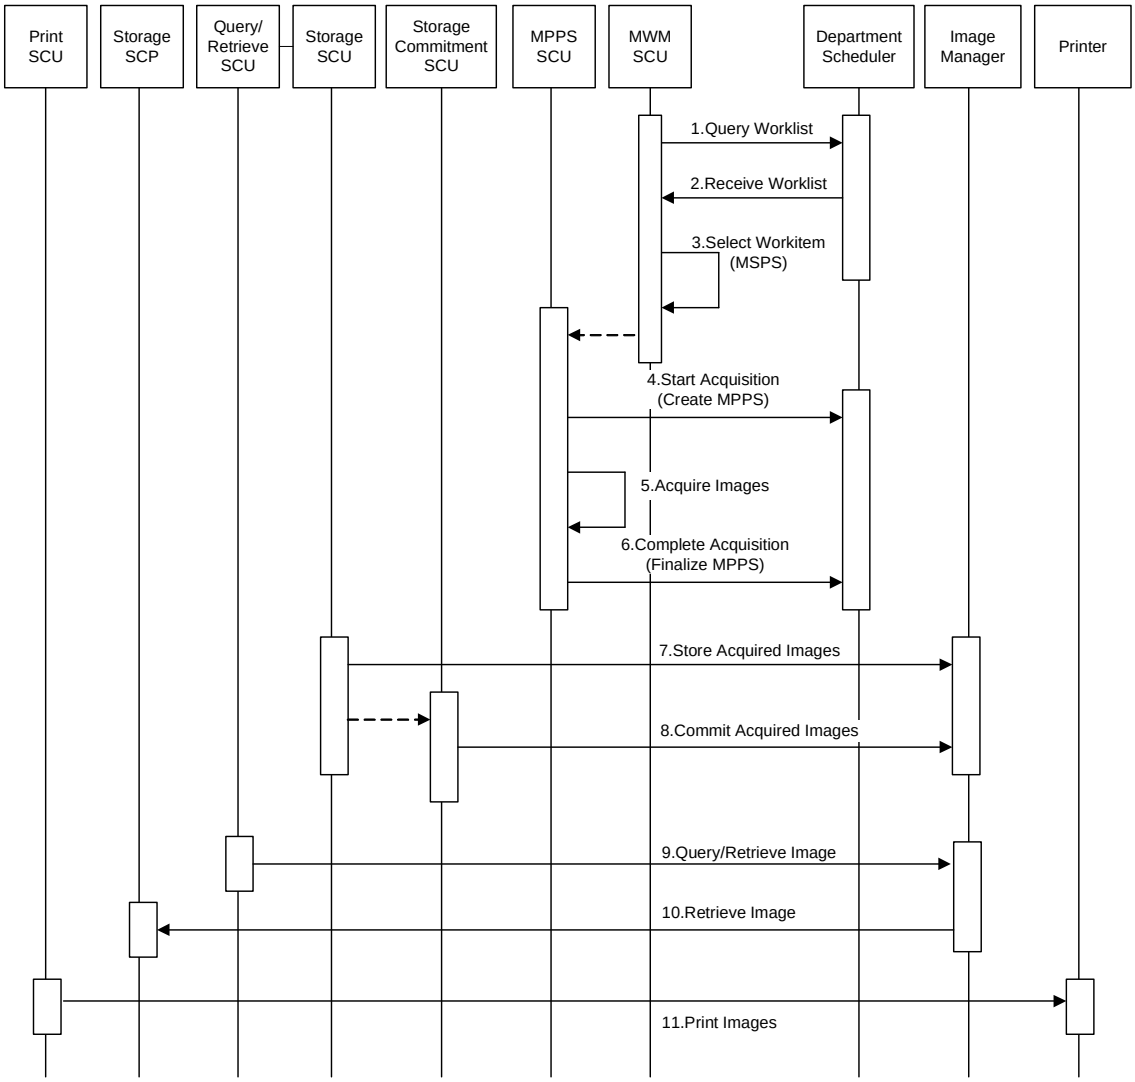

FIGURE 4.1-2 SEQUENCING CONSTRAINTS

Under normal workflow conditions the sequencing constraints illustrated in Figure 4.1-2 apply:

1. Query Worklist
2. Receive Worklist
3. Select Workitem (MSPS)
4. Start Acquisition (Create MPPS)
5. Acquire Images
6. Complete Acquisition (Finalize MPPS)
7. Store Acquired Images
8. Commit Acquired Images
9. Query/Retrieve Images
10. Receive Images
11. Print Images

Other workflow situations (e.g. auto-send) will have other sequencing constraints.

4.2.4.3.1 Activity – Commit Sent Images

4.2.4.3.1.1 Description and Sequencing of Activities

If the remote AE is configured as a Storage Commitment-SCP AE, the Storage Commitment-SCU AE will, after all images have been sent, transmit a single storage commitment request (N-ACTION). Upon receiving the N-ACTION response the Storage Commitment-SCU AE will release the association. The notification of storage commitment (N-EVENT-REPORT) will be received over a separate association.

A possible sequence of interactions between the Storage Commitment-SCU AE and an Image Manager (e.g.

a storage or archive device supporting the Storage Commitment SOP Classes as an SCP) is illustrated in the Figure above:

1. The Storage Commitment-SCU AE opens an association with the Image Manager.
2. A storage commitment request (N-ACTION) is transmitted to the Image Manager to obtain storage commitment of previously transmitted images. The Image Manager replies with an N-ACTION response indicating the request has been received and is being processed.
3. The Storage Commitment-SCU AE closes the association with the Image Manager.

NOTE: The N-EVENT-REPORT will be sent over a separate association initiated by the Image Manager. (See Section 4.2.2.4.1)

TABLE 4.2-29 STORAGE COMMITMENT N-ACTION RESPONSE STATUS HANDLING BEHAVIOR

Service Status	Further Meaning	Error Code	Behavior
Success	Success	0000	The request for storage commitment is considered successfully sent. A timer is started which will expire if no N-EVENT-REPORT for the Transaction UID is received within a configurable timeout period.
*	*	Any other status code.	The association is aborted and the request for storage commitment is marked as failed.

4.2.4.4 Association Initiation Policy

4.2.4.4.1 Activity – Receive Storage Commitment

4.2.4.4.1.1 Description and Sequencing of Activities

The Storage Commitment-SCU AE will accept associations in order to receive responses to a storage commitment request.

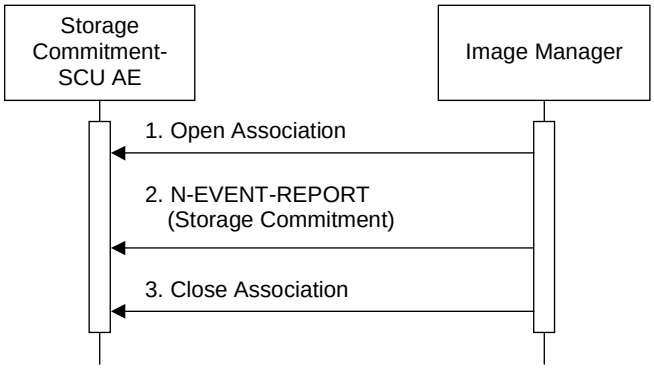

FIGURE 4.2-5 SEQUENCING OF ACTIVITY – RECEIVE STORAGE COMMITMENT

A possible sequence of interactions between the Storage Commitment-SCU AE and an Image Manager (e.g. a storage or archive device supporting the Storage Commitment SOP Classes as an SCP) is illustrated in the Figure above:

1. The Image Manager opens an association with the Storage Commitment-SCU AE.
2. The Image Manager sends an N-EVENT-REPORT request notifying the Storage-SCU AE of the status of a previous storage commitment request. The Storage-SCU AE replies with an N-EVENT-REPORT response confirming receipt.
3. The Image Manager closes an association with the Storage Commitment-SCU AE.

4.2.4.4.1.2 Proposed Presentation Contexts

The Presentation Contexts shown in the following table are acceptable to the Storage Commitment-SCU AE:

TABLE 4.2-30 PROPOSED PRESENTATION CONTEXTS FOR ACTIVITY RECEIVE STORAGE COMMITMENT

4.2.4.4.1.3 SOP Specific Conformance for Storage Commitment SOP Classes

The behavior of Storage Commitment-SCU AE when receiving Event Types within the N-EVENT-REPORT is summarized in the Table below.

TABLE 4.2-31 STORAGE COMMITMENT N-EVENT-REPORT BEHAVIOR

Event Type Name	Event Type ID	Behavior
Storage Commitment Request Successful	1	The Storage Commitment SCU AE permits the operator(s) to delete the Referenced SOP Instances under Referenced SOP Sequence (0008,1199), or deletes the Instances from the local database automatically.
Storage Commitment Request Complete – Failures Exist	2	The Storage Commitment SCU AE requests the Storage SCU AE to send the Referenced SOP Instances under Failed SOP Sequence (0008,1198).

The reasons for returning specific status codes in a N-EVENT-REPORT response are summarized in the table below.

TABLE 4.2-32 STORAGE COMMITMENT N-EVENT-REPORT RESPONCE STATUS REASONS

Service Status	Further Meaning	Error Code	Reasons
Success	Success	0000	The storage commitment result has been successfully received.
Failure	Unrecognized Operation	0211H	The Transaction UID in the N-EVENT-REPORT request is not recognized (was never issued within an N-ACTION request).
Failure	Resource Limitation	0213H	The Transaction UID in the N-EVENT-REPORT request has expired (no N-EVENT-REPORT was received within a configurable time limit).
Failure	No Such Event Type	0113H	An invalid Event Type ID was supplied in the N-EVENT-REPORT request.

Service Status	Further Meaning	Error Code	Reasons
Failure	Processing Failure	0110H	An internal error occurred during processing of the N-EVENT-REPORT. A short description of the error will be returned in Error Comment (0000,0902).
Failure	Invalid Argument Value	0115H	One or more SOP Instance UIDs with the Referenced SOP Sequence (0008,1199) or Failed SOP Sequence (0008,1198) was not included in the Storage Commitment Request associated with this Transaction UID. The unrecognized SOP Instance UIDs will be returned within the Event Information of the N-EVENT-REPORT response.
*	*	Any other status code.	The storage commitment result has some error, so result has not been successfully received.

4.2.5 MWM-SCU Application Entity Specification

4.2.5.1 SOP Classes

DR-ID 300CL provides Standard Conformance to the following SOP Classes:

TABLE 4.2-33 SOP CLASSES FOR THE MWM-SCU AE

4.2.5.3 Association Initiation Policy

4.2.5.3.1 Activity – Update Worklist

4.2.5.3.1.1 Description and Sequencing of Activities

The request for an Update Worklist is initiated by user interaction, i.e. pressing the buttons “Refresh” or automatically at specific time intervals, configurable by the user.

Upon initiation of the request, the MWM-SCU AE will build an Identifier for the C-FIND request, will initiate an Association to send the request and will wait for Worklist responses. After retrieval of all responses, the MWM-SCU AE will access the local database to add or update patient demographic data. The results will be displayed in a list.

The will initiate an Association in order to issue a C-FIND request according to the Modality Worklist Information Model.

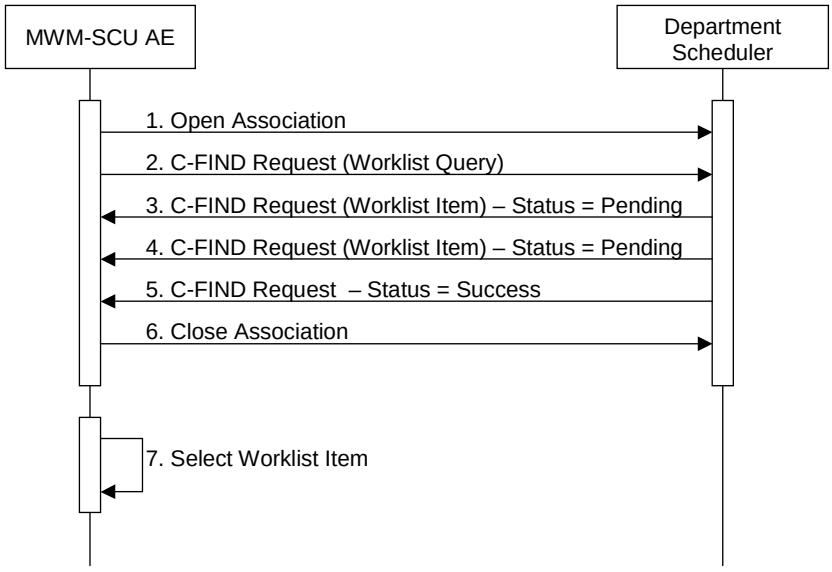

FIGURE 4.2-6 SEQUENCING OF ACTIVITY – UPDATE WORKLIST

A possible sequence of interactions between the MWM-SCU AE and a Departmental Scheduler (e.g. a device such as a RIS or HIS which supports the Modality Worklist SOP Class as an SCP) is illustrated in the Figure above:

1. The MWM-SCU AE opens an association with the Department Scheduler.
2. The MWM-SCU AE sends a C-FIND request to the Department Scheduler containing the Worklist Query attributes.
3. The Department Scheduler returns a C-FIND response containing the requested attributes of the first matching worklist item.

4. The Departmental Scheduler returns another C-FIND response containing the requested attributes of the second matching Worklist Item.
5. The Department Scheduler returns another C-FIND response with status Success indicating that no further matching worklist items exist. This example assumes that only 2 worklist items match the Worklist Query.
6. The MWM-SCU AE closes the association with the Department Scheduler.
7. The user selects a worklist item from the Worklist and prepares to acquire new images.

4.2.5.3.1.2 Proposed Presentation Contexts

The MWM-SCU AE is capable of proposing the Presentation Contexts shown in the following table:

4.2.5.3.1.3 SOP Specific Conformance for Modality Worklist SOP Classes

The MWM-SCU AE provides standard conformance to the Modality Worklist SOP Class as an SCU.

The behavior of the MWM-SCU AE when encountering status codes in a Modality Worklist C-FIND response is summarized in the table below.

TABLE 4.2-39 MODALITY WORKLIST C-FIND RESPONSE STATUS HANDLING BEHAVIOR

Acquired images will always use the Study Instance UID specified for the Scheduled Procedure Step (if available). If an acquisition is unscheduled, a Study Instance UID will be generated locally.

The table below provides a description of the MWM-SCU AE Worklist Request Identifier and specifies the attributes that are copied into the images. Unexpected attributes returned in a C-FIND response are ignored.

Attribute Name: Attributes supported to build the MWM-SCU AE Worklist Request Identifier.

Tag: DICOM tag for this attribute.

VR: DICOM VR for this attribute.

M: Matching keys for (automatic) Worklist Update. An “S” will indicate that the MWM-SCU AE will supply an attribute value for Single Value Matching, a “R” will indicate Range Matching and a “*” will denote wildcard matching.

4.2.6.3 Association Initiation Policy

4.2.6.3.1 Activity – Acquire Images

4.2.6.3.1.1 Description and Sequencing of Activities

The MPPS-SCU AE performs the creation of an MPPS instance automatically when the user selects and starts a worklist item. Further updates on the MPPS data can be performed when the user completes the acquisition.

The MPPS-SCU AE will initiate an association to issue an:

— N-CREATE request according to the CREATE Modality Performed Procedure Step SOP Instance operation, or an:

— N-SET request to update the contents and state of the MPPS according to the SET Modality Performed Procedure Step Information operation.

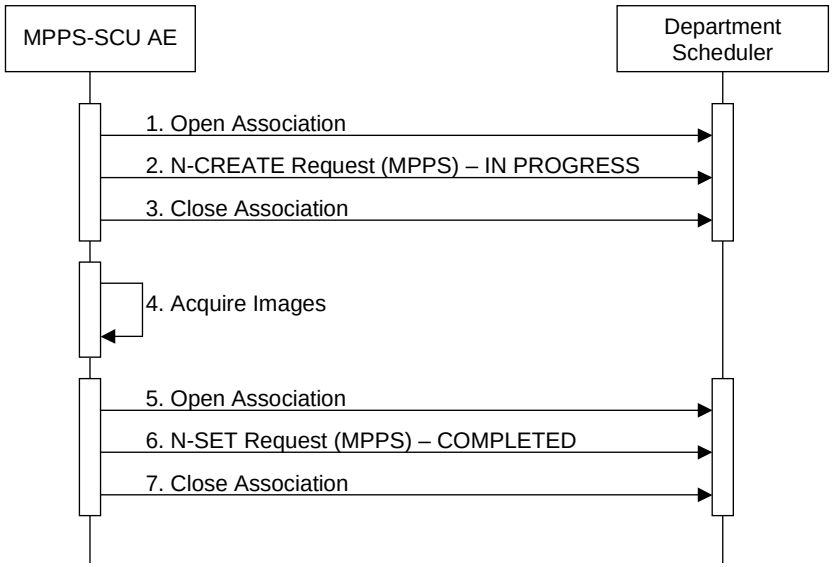

FIGURE 4.2-7 SEQUENCING OF ACTIVITY – ACQUIRE IMAGES

A possible sequence of interactions between the MPPS SCU AE and a Department Scheduler (e.g. a device such as a RIS or HIS which supports the MPPS SOP Class as an SCP) is illustrated in the Figure above:

1. The MPPS-SCU AE opens an association with the Department Scheduler.
2. The MPPS-SCU AE sends an N-CREATE request to the Department Scheduler to create an MPPS instance with status of “IN PROGRESS” and create all necessary attributes. The Department Scheduler acknowledges the MPPS creation with an N-CREATE response (status success).
3. The MPPS-SCU AE closes the association with the Department Scheduler.
4. All images are acquired and stored in the local database.
5. The MPPS-SCU AE opens an association with the Departmental Scheduler.
6. The MPPS-SCU AE sends an N-SET request to the Department Scheduler to update the MPPS instance with status of “COMPLETED” and set all necessary attributes. The Department Scheduler acknowledges the MPPS update with an N-SET response (status success).
7. The MPPS-SCU AE closes the association with the Department Scheduler.

4.2.6.3.1.2 Proposed Presentation Contexts

4.2.7.3 Association Initiation Policy

4.2.7.3.1 Activity – Film Images

4.2.7.3.1.1 Description and Sequencing of Activities

A user composes images onto film sheets and requests them to be sent to a specific hardcopy device. The user can select the desired film format and number of copies. Each print-job is forwarded to the job queue and processed individually.

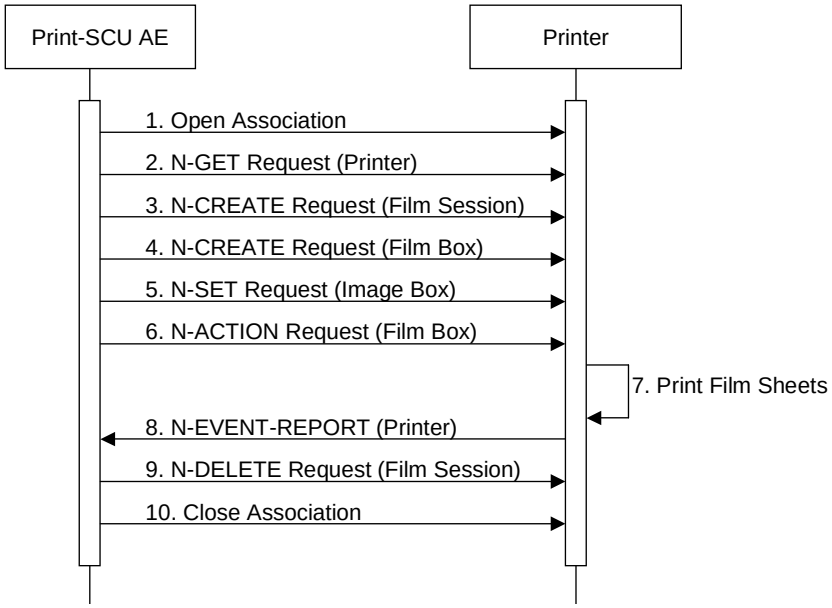

FIGURE 4.2-8 SEQUENCING OF ACTIVITY – FILM IMAGES

A typical sequence of DIMSE messages sent over an association between Print-SCU AE and a Printer is illustrated in the Figure above:

1. The Print-SCU AE opens an association with the Printer.
2. N-GET on the Printer SOP Class is used to obtain current printer status information. If the Printer reports a status of FAILURE, the print-job is switched to a failed state and the user informed.
3. N-CREATE on the Film Session SOP Class creates a Film Session.
4. N-CREATE on the Film Box SOP Class creates a Film Box linked to the Film Session.
5. N-SET on the Image Box SOP Class transfers the contents of the film sheet to the printer.
6. N-ACTION on the Film Box SOP Class instructs the Printer to print the Film Box.
7. The printer prints the requested number of film sheets.
8. The Printer asynchronously reports its status via N-EVENT-REPORT notification (Printer SOP Class). If the Printer reports a status of FAILURE, the print-job is switched to a failed state and the user informed.
9. N-DELETE on the Film Session SOP Class deletes the complete Film Session SOP Instance hierarchy.
10. The Print SCU AE closes the association with the Printer.

4.2.8.3 Association Initiation Policy

4.2.8.3.1 Activity – Query and Retrieve Image

4.2.8.3.1.1 Description and Sequencing of Activities

The Q/R-SCU AE is activated when the user selects a remote node to query and enters some key information, Patient's Name, Patient ID, Study Date, Accession Number and Modality. The user can select studies, series and images to be retrieved. The images will be received at the Storage-SCP AE.

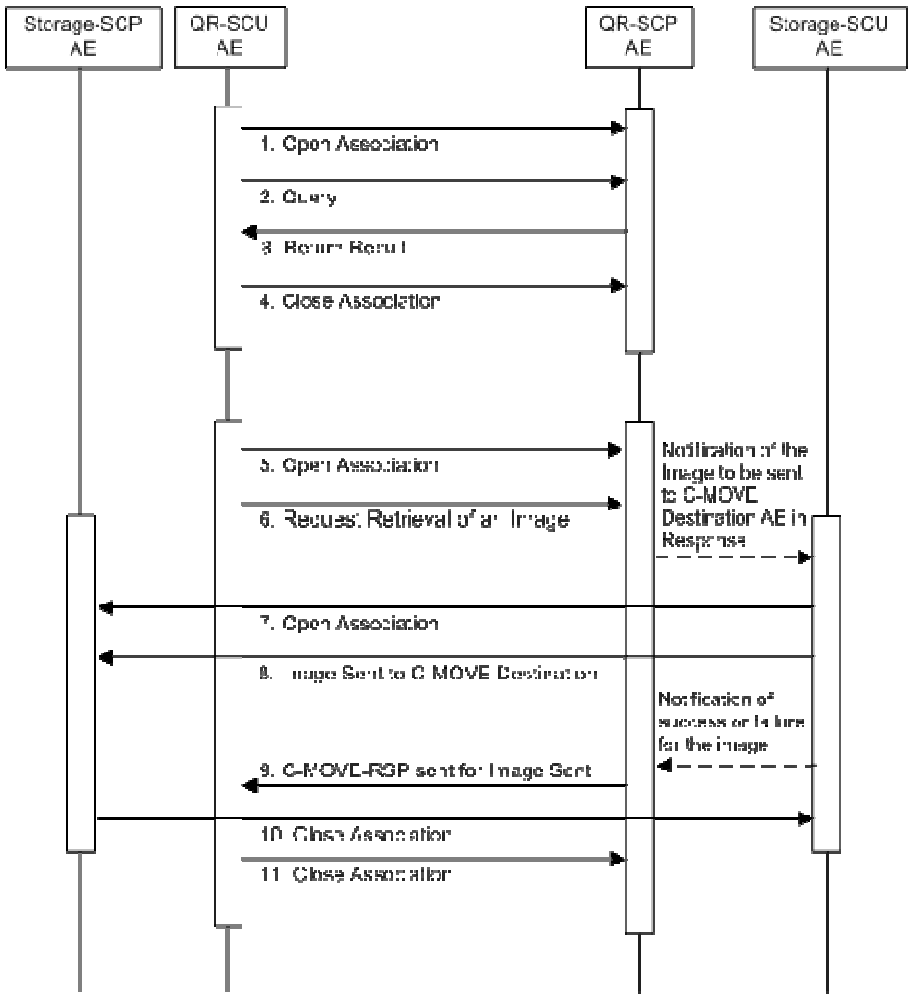

FIGURE 4.2-9 SEQUENCING OF ACTIVITY – QUERY AND RETRIEVE IMAGE

The following sequencing constraints illustrated in the Figure above:

1. The Q/R-SCU AE opens an association with the Q/R-SCP AE.
2. The Q/R-SCU AE sends a C-FIND-RQ Message.
3. The Q/R-SCP AE returns a C-FIND-RSP Message to the Q/R-SCU AE with matching information. A C-FIND-RSP is sent for each entity matching the identifier specified in the C-FIND-RQ. A final C-FIND-RSP is sent indicating that the matching is complete.
4. The Q/R-SCU AE closes the association.
5. The Q/R-SCU AE opens an association with the Q/R-SCP AE.
6. The Q/R-SCU AE sends a C-MOVE-RQ Message. The Q/R-SCP AE notifies the Storage-SCU AE to send the Composite SOP Instances to the peer C-MOVE Destination AE as indicated in the C-MOVE-RQ.
7. The Storage-SCU AE opens an association with the C-MOVE Destination AE.
8. The Storage-SCU AE sends images to the C-MOVE Destination AE. The Storage-SCU AE indicates to the Q/R-SCP AE whether the transfer succeeded or failed.
9. The Q/R-SCP AE then returns a C-MOVE-RSP indicating this success or failure.
10. The Storage-SCU AE closes the association.

4.2.9.4.1.2 SOP Specific Conformance Image Storage SOP Classes

The associated Activity with the Storage service is the storage of medical image data received over the network on a designated hard disk. The Storage-SCP AE will return a failure status if it is unable to store the image on the local file system.

TABLE 4.2- 83 THE STORAGE-SCP AE C-STORE RESPONSE STATUS RETURN REASONS

Service Status	Further Meaning	Error Code	Behavior
Success	Success	0000	The SCP has successfully stored the SOP Instance. If all SOP Instances in a send job have status success then the job is marked as complete.
Refused	Out of Resources	A700	The Association is aborted using A-ABORT and the send job is marked as failed. The status meaning is logged and the job failure is reported to the user via the job control application. This is a transient failure.
Error	Data Set does not match SOP Class	A900	The Association is aborted using A-ABORT and the send job is marked as failed. The status meaning is logged and the job failure is reported to the user via the job control application.
*	*	Any other status code.	The Association is aborted using A-ABORT and the send job is marked as failed. The status code is logged and the job failure is reported to the user via the job control application.

5 MEDIA INTERCHANGE

5.1 IMPLEMENTATION MODEL

5.1.1 Application Data Flow

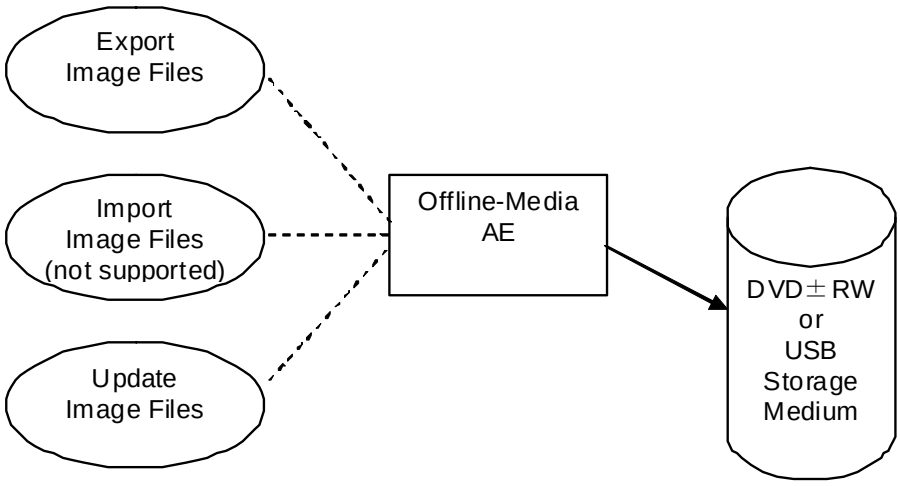

FIGURE 5.1-1 APPLICATION DATA FLOW DIAGRAM FOR MEDIA STORAGE

— The Offline-Media AE exports images to a DVD±RW or USB Storage medium. It is associated with the local real-world activity “Export Image Files”. “Export Image Files” is performed upon user request for selected studies.

— The DR-ID 300CL does not support Media Storage to import.

— The Offline-Media AE updates images on a DVD±RW or USB Storage medium. It is associated with the local real-world activity “Update Image Files”. “Update Image Files” is performed upon user request for selected studies.

5.1.2 Functional Definition of AEs

5.1.2.1 Functional Definition of Offline-Media Application Entity

Export Image Files:

The DR-ID300CL builds DICOM Information Objects for storage and creates a DICOMDIR file that represents the contents of the DICOM Information Objects to be recorded. Then the DR-ID300CL records DICOM Information Objects and the DICOMDIR file to the USB storage medium.

Update Image Files:

The DR-ID300CL reads a File-set of the medium and writes it to the local storage device. The DR-ID300CL adds the studies/images to the File-Set, then writes it to the medium and modifies the DICOMDIR file.

5.1.3 Sequencing of Real-World Activities

5.1.3.1 Activity – Export Image Files

5.1.3.1.1 Activity – Export Image Files to DVD±RW or USB storage medium

Operator requests to create new File-set(s) onto a storage medium. The requests are placed in a queue and are executed in the background.

The operations for "Export Image Files to Storage medium" are described below:

1. Insert a medium and start mounting media manually if the setting is not automatic
2. Select the studies on the study list of DR-ID300CL to store to the medium.
3. Request to send to the medium.

5.1.3.2 Activity – Import Image Files

The DR-ID 300CL does not support Media Storage to import.

5.1.3.3 Activity – Update Image Files

Operator requests to add new objects to an already existing File-set on the Storage medium. The requests are placed in a queue and are executed in the background.

The operations for "Update Image Files" are described below:

1. Insert a medium that has File-set. And start mounting media manually if the setting is not automatic.
2. Select the studies on the study list of DR-ID300CL to add to the medium..
3. Request to send to the medium..

5.1.4 File Meta Information Options

7 SECURTIY

DR-ID 300CL does not support any specific security measures.

It is assumed that DR-ID 300CL is used within a secured environment. It is assumed that a secured environment includes at a minimum:

a. Firewall or router protections to ensure that only approved external hosts have network access to DR-ID 300CL.

b. Firewall or router protections to ensure that DR-ID 300CL only has network access to approved external hosts and services.

c. Any communication with external hosts and services outside the locally secured environment use appropriate secure network channels (e.g. such as a Virtual Private Network (VPN))

Other network security procedures such as automated intrusion detection may be appropriate in some environments. Additional security features may be established by the local security policy and are beyond the scope of this conformance statement.

ANAP	Attribute Not Always Present
ALWAYS	Always Present
EMPTY	Attribute is sent without a value (attribute always sent zero length)

The abbreviations used in the “Source” column:

MWL	the attribute value source Modality Worklist
USER	the attribute value source is from User input
AUTO	the attribute value is generated automatically
CONFIG	the attribute value source is a configurable parameter
OTHER	the attribute value source is from other modality

NOTE: All dates and times are encoded in the local configured calendar and time. Date, Time and Time zone are configured using the Service/Installation Tool.

The following tables describe just the attributes which DR-ID 300CL generates. The attributes which other modalities or the equipments generated is sent, if they exist, that way.

Note 1:

The Image Type consists of the following elements as per DICOM definitions.

Value 1: Pixel data Characteristics
Value 2: Patient Examination Characteristics
Value 3: Modality Specific Characteristics
Value 4 or after: Other Value "n" ("n" represents a numeric value.)

On the DR-ID 300CL, the above values should be interpreted as described below. Note that each of the elements may be omitted (only delimiters exist). When a portion after a certain element is fully omitted, even delimiters do not exist.

Because Value 1 and Value 2 have DICOM-defined meanings, they comply with the DICOM definitions. If omitted, they will be considered to be "ORIGINAL" or "PRIMARY".

Value 3 determines image data types such as pre-normalized image, normalized image or processed image. If omitted, it will be considered to be "NORMALIZED".

Value 4 (Other Value 1) represents processing purpose type of an image. When omitted, it will be considered to be "RT".

Value 5 (Other Value 2) determines a types of change processing performed on an original image. Value 5 will not be determined if no changes have been made.

Value 6 (Other Value 3) determines a date of the change made on an image with Value 5 (Other Value 2) above. Value 6 will not be determined if no changes have been made.

Value 7 (Other Value 4) determines a type of special processing performed on an image, which will not be determined if no special image processing has been performed.

Value 8 (Other Value 5) determines a date of the special image processing performed with Value 7 (Other Value 4) above. Value 8 will not be determined if no special image processing has been performed.

Value 9 (Other Value 6) determines the distance (nm) between the centers of each pixel when an IP is read.

Each of the values mentioned above will represent the following specific meaning.

Value 1: (as per DICOM definitions)

(In cases of Computed Radiography Image Storage and FUJI Private Computed Radiography Image Storage)

ORIGINAL An image whose pixel size is based on the original image (pre-normalized image or normalized image).

DERIVED An image derived from pixel size of one or more images according to a specific method. (processed image).

(In case of Digital X-ray Image Storage – For Presentation, Digital X-Ray Image Storage – For Processing, Digital Mammography X-ray Image Storage – For Presentation and Digital Mammography X-Ray Image Storage – For Processing)

ORIGINAL An image acquired from normal exposure (with or without image processing having been performed)

DERIVED An image created by morphological processing (image stitching, energy subtraction.)

Value 2: (as per DICOM definitions)

PRIMARY An image generated as a direct result from a patient study.

SECONDARY An image generated after the first patient study.

Value 3:

(In cases of Computed Radiography Image Storage and FUJI Private Computed Radiography Image Storage)

PRE_NORMALIZED A pre-normalized image.
NORMALIZED A normalized image.
POST_PROCESSED An already processed image.

(In case of Digital X-ray Image Storage – For Presentation, Digital X-Ray Image Storage – For Processing, Digital Mammography X-ray Image Storage – For Presentation and Digital Mammography X-Ray Image Storage – For Processing)

No value

Value 4:

RT Routine exposure image
ES_L Low-pressure image for energy subtraction processing.
ES_H High-pressure image for energy subtraction processing.
TO Tomosynthesis exposure image

Value 5:

RENORMALIZED A re-normalized image.
MODIFIED_PARAM An image on which image processing parameters have been modified.

Value 6 and Value 8:

Determine in the "YYYYMMDDhhmmss" format a date when image processing was performed.

Value 7:

STICHED Image composition processing that generates one image from multiple images.
BONE A bone image based on the energy subtraction processing.
SOFT_TISSUE Soft tissue image based on the energy subtraction processing.
SLICE Tomosynthesis reconstruction image

Value 9:

The distance (nm) between the centers of each pixel when an IP is re
When "RENORMALIZED" has been determined for Value 5, what is determined will not be changed even if parameters were modified.

Note 2:

The CR and DX image is a projected image and Imager Pixel Spacing (0018,1164) must be used for the distance between the centers of each pixel. However, because some workstations perform necessary processing based on Pixel Spacing (0028,0030), such distance on the Detector surface is determined for it.

According to DICOM definitions, the Pixel Spacing (0028,0030) is to represent the distance between the centers of each pixel in the "patient's body". Because the CR and DX image is a projected image, it is not possible to calculate the distance between the centers of each pixel "in the patient's body".

Therefore, the value determined here is not correct in the light of the DICOM definitions. Note that even if the distance, area or dimensions are calculated based on the value presented here, the resultant values thus calculated do not precisely reflect an object in the patient's body.

(Remember that the CR and DX image is a projected image, which disables measurements of the dimensions of the object precisely reflected by actual dimensions in the patient's body.)
